

## Assignment-01

Q1. > language(WEIRD) = { odd numbers of b's and an even numbers of a's }

$$\Sigma = \{a, b\}$$

$$\text{language(WEIRD)} = \{ a^{2n} b^{2n+1} \mid n=0,1,2,3,\dots \}$$
$$= \{ b, aab, aba, baa, bbb, \dots \}$$

by Recursive definition for WEIRD :-

Rule 1:  $b \in \text{WEIRD}$

Rule 2: If  $w \in \text{WEIRD}$ , then  $aa w$ , ~~abw~~,  $baw$ ,  $aaa$ ,  $wbb$  are in WEIRD

Rule 3: The only elements in WEIRD are the ones that are constructed by following rules 1 & 2.

Q2 > 4-PERMUTATION = { 1234, 4231, 3421, 3241, 1243, 3214, 4213 }

Q3 > (a)  $L = \{ aab, ba, bb, baab \}$

Regular expression:

$$\Rightarrow (aab + ba + bb + baab)$$

(b) The language of all strings containing exactly two b's:

$$\{ bb, abb, bab, bba, aabb, \dots \}$$

Regular expression:

$$(a+b)^* b (a+b)^* b$$
$$\Rightarrow a^* b a^* b$$

(c) The language of all strings containing at least one a and at least one b.

$\{ ab, aab, aba, baa, abb, bab, bba, aaab, \dots \}$

Regular expression:

$$\Rightarrow \boxed{(a+b)^* a (a+b)^* b (a+b)^*}$$

(d) The language of all strings that do not end with ba.

$\{ \Lambda, a, b, ab, aa, ba, bb, \dots \}$

Regular Expression:

$$\Rightarrow \boxed{(a+b)^* (aa+ab+bb) + a + b + \Lambda}$$

(e) The language of all strings that do not containing the substring bb.

$\{ \Lambda, a, b, aa, ab, ba, \underline{aaa}, \underline{aba}, baa, abb, \dots \}$

Regular Expression:

$$\Rightarrow \boxed{\Lambda + (ab)^* + a^*}$$

(f) The language of all strings in which every b is followed immediately by aa

$\{ \Lambda, a, baa, abaa, aabaa, aabaaaa, baabaa, \dots \}$

Regular Expression:

$$\Lambda + a^* + a^* (baa)^* a^*$$

Q4.  $S = \{a, b\}$

(a)  $L = \{ \text{all strings with exactly one } b \}$

$\{ b, ab, ba, abba, \dots \}$

$(a^*)b(a^*)$

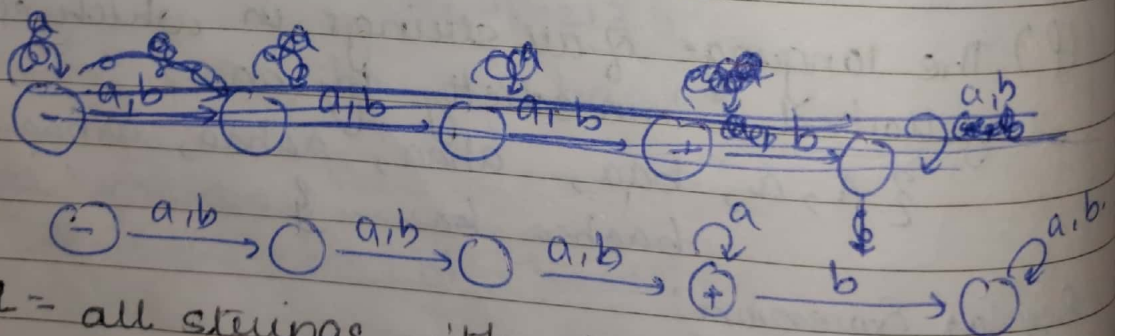

(b)  $L = \{ \text{all strings with at least one } a \}$

$\{ a, ab, aa, ba, abb, \dots \}$

(c)  $L = \{ \text{all strings with no more than 3 } b\text{'s} \}$

$\{ a, b, aa, bb, aaa, bbb, \dots \}$

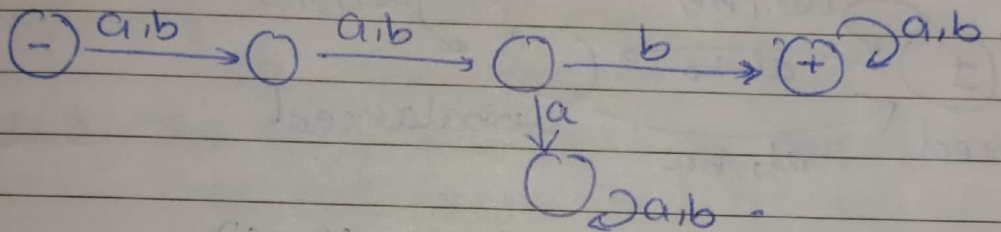

(d)  $L = \{ \text{all strings with at least one } a \text{ and exactly 2 } b\text{'s} \}$

(d)

(e)  $L = \{ \text{all strings with } b \text{ as third letter} \}$

(f)  $L = \{ w, |w| \bmod 4 = 0 \}$

length is  
multiple  
of 4

# Assn 1

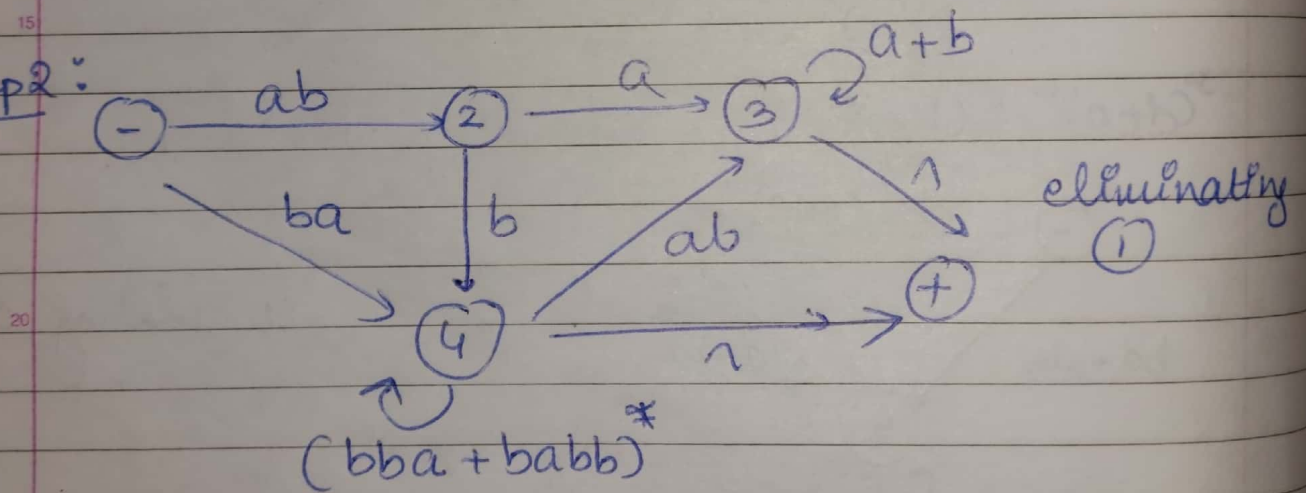

Q5. Kleene's Th<sup>m</sup>

Step 1:

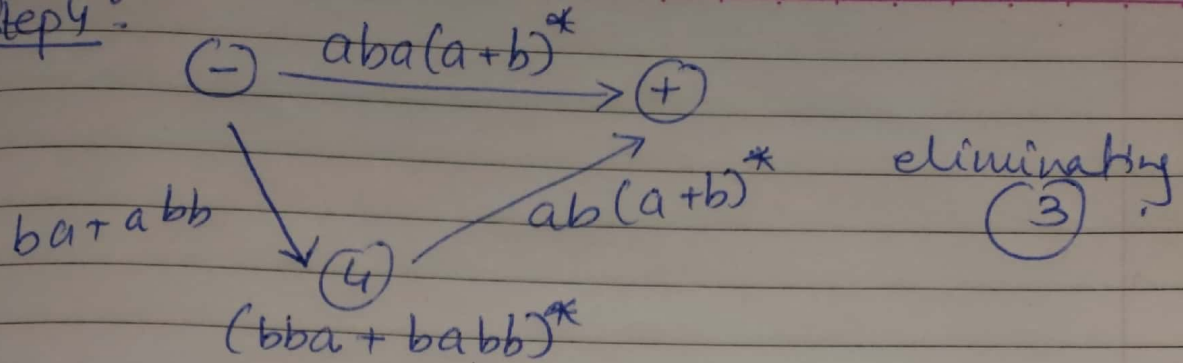

Step 2:

Step 3:

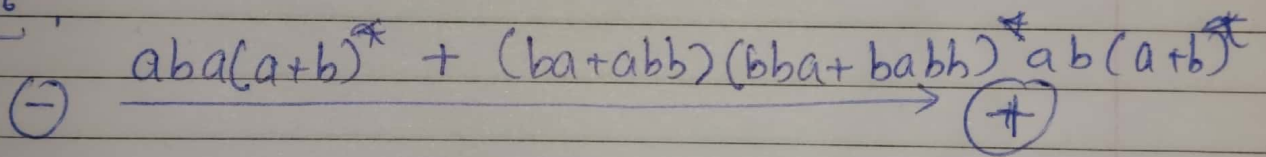

Step 4:

Step 5:

Step 6:

Regular Expression:

$$aba(a+b)^* + (ba+abb)(bba+babbb)^*ab(a+b)^*$$
